

# CRS PORTAL

**CRS Portal** represents a modular web-based solution for a controlled and unified approach providing intuitive business intelligence (BI) for your organization in order to make effective, confident and innovative - still - fact-based decisions.

**CRS Portal** allows you to visualize and analyze your financial, marketing, sales, or operational data in an easily manageable, functional way on every level within the company hierarchy.

**CRS Portal** effectively handles company data according to existing business rules being fed by centrally shared and validated meta-data to any location and functional branch within your company based on standard principals, thus eliminating the need of maintaining multiple BI solutions and integration of different software platforms.

**CRS Portal** comprises several value-added services integrating BI into existing data environment and consolidates relevant data from across multiple sources into a single application through role based interfaces

*“Effective solution both for large and small companies!”*

Market advantage of reliable and fast verified information!

### Why to use CRS Portal?

- Enables business users and executive managers to instantly identify key indicators on-the-go that may impact their efficiency to create more accurate forward-looking strategies.
- Increases profitability by freeing resources from repetitive reporting and administration activities thus lowering expenses paid for such activities
- Leverages transparency through your company's operation by query + analysis.
- Avoids manual paperwork, unsynchronized and inconsistent reporting between company units.
- Offers outstanding value/cost ratio covering a broad range of functionality.
- Flexibly represents company data in desired reporting formats on the go.
- Helps exploring associations in your company data.
- Smoothly interacts with dynamic apps, dashboards and analytics.

#### Balance By Months

**CRS Portal** grants a simple solution to create reports, indicators and process-based applications. The diverse functionality provides very effective support for data security and to controllability.

By using **CRS Portal** human resource needs can be reduced, thereby cost reduction is achieved.

### Some basic function of CRS Portal:

- Interactive, customizable start-up screen (Dashboard)
- Report creation and publication
- KPI creation and publication
- Document sharing
- Ad-hoc reports
- Data mining and analysis without data cube
- Process based applications
- 100% portal usage audit

*“Up-to-date and controlled information in one place.”*

Market advantage of reliable and fast verified information!

The CRS Portal applicability:

- Collection of data assets within an enterprise within a controlled environment.
- Reduction of effective time spent on reporting tasks with automated processes.
- Dynamic KPI's and indicators.
- Design and creation of process based applications.
- Monitoring and reviewing of enterprise reporting processes in order to exploit resources more effectively.
- Eliminating the isolation of sealing applications and databases and providing a centralized tool for administration, in case data are part of the company's data assets.
- Reduction of report printouts and e-mails containing reporting data.

Market advantage of reliable and fast verified information!

**The structure of CRS Portal:**

**CRS Portal** is a web-based application where logical layers are separated, but there is a 100% cooperation between the different layers. All business users, analysts, controllers and managers can find those components, that can simplify their everyday work.

**CRS Portal layers and components**

Business data, managed and analyzed by **CRS portal** can be displayed in many different ways.

**Small business package:**

The **Small Business Package Suite** includes pre-compiled monthly financial reports and indicators (KPIs) in **CRS Portal** with a supported application of automated data analysis. Users can create pre-built reports, indicators (KPIs) and data analyzes without the need of any integration to other analytic systems.

Shortly, **CRS Portal Small Business Package** is a turn-key automatic office, which helps everyone to make effective business decisions based on reliable financial information.

Market advantage of reliable and fast verified information!

**The Small Business Package contains:**

- Pre-built interactive startup screen
- 7 financial reports with 4 report package
- 10 financial indicator (KPI)
- Documentum management support
- External application integration (link)
- Decision support analytics (BI)
- Small Business Package application

The **Small Business Package** collects and displays accounting and financial information in a fast way. This solution is recommended for accountancies or companies who do not currently have a satisfactory report preparation. **CRS Portal** is an effective and simply cost-effective automated tool for data analysis.

The **Small Business Package** doesn't require integration with other systems. All prepared contents can be used promptly, by simply loading the predefined CSV files with a few clicks.

**Our visions :**

*Our project portfolio is the following:*

- „What if?” analysis.
- Online visual data analysis.
- Scorecards.
- Mobile application.
- Automated content delivery.
